	<p>Traffic Variable is a non-persistent metric associated with a page view.</p> <p>Pre-defined Traffic Variables include</p> <p>s.pageName 100 bytes The pageName variable contains the name of each page on your site. If pageName is left blank, a less reader-friendly URL is used to represent page name in SiteCatalyst reports.</p> <p>s.channel 100 bytes The channel variable is used to identify a section of your site. Adobe recommends that you populate the channel variable on every page.</p> <p>s.hier1-5 255 bytes It is used to determine the location of a page in your site's hierarchy.</p> <p>s.server 100 bytes It is typically used to show either the domain of a Web page (to show which domains people come to) or the server serving the page (for a load balancing quick reference).</p> <p>s.pageType 255 bytes The pageType variable captures the errant URL and the referring URL when a 404 Error page is displayed, which allows SC users to quickly find broken links and paths that are no longer valid on the site.</p>	<p>The products (s.products) variable is used for tracking products and product categories as well as purchase quantity and purchase price.</p> <p>s.products = "Category; Product; Quantity; Price [, Category; Product; Quantity; Price]"</p> <ul style="list-style-type: none"> Use a semicolon between values in one product and a comma to separate products. Revenue and Units come from the product string <p>s.purchaseID The s.purchaseID variable is used in conjunction with the purchase event.</p> <ul style="list-style-type: none"> Its function is to keep orders from being counted multiple times. <p>s.transactionID The s.purchaseID variable provides reference to the visitor and their current session. It is only used to associate upload data with the online visit/visitor. eVars.</p> <p>States s.state The state variable enables you to determine the amount of conversion your site generated from a particular U.S state or province.</p> <p>Zip/Postal Code s.zip The zip variable enables you to determine the amount of conversion your site generates from a particular U.S zip/postal code.</p>	<p>s.events. Omniture offers seven predefined events that you can use in conjunction with you shopping cart. For example, the predefined events track products as they move through the check- out process.</p> <p>Custom Events s.events. Site Catalyst enables you to track any custom success event that you want to measure. For example, shipping is not part of the predefined check-out process, but you can add it as a custom event.</p> <p>Events are associated with s.products variable which stores additional information about the event.</p>
